

HOW TO BEST CARE FOR EQUIPMENT

We recommend that students follow the CDC guidelines for cleaning and disinfecting items (<https://bit.ly/3bjj99f>) in their possession. We ask that they keep in mind that cleaning chemicals are often corrosive, and any liquid is destructive to circuit boards and electronics. If you are using a wipe or towel that you think is too saturated with liquid, please ring out before using to clean/disinfect the item. Please remember to use a chamois or other lint-free towel to clean lenses or other optical elements. Please contact equipment@journalism.cuny.edu for further advice.
